Color instructions and Installation video available at AccentGlowLED.com/instructions

Read these instructions completely before beginning installation

AccentGlowLED,LLC. does not assume responsibility and disclaims liability for damage, loss, or expense arising from improper use, operation, or installation of this product.

You may need the following tools:

- Plastic or Metal Panel Tool
- 1/4" Drill Bit
- Electrical Tape
- Wire Strippers (product similar to the Irwin 2078300 is used)

Disassembly:

-Prior to beginning; engage the parking brake and make sure vehicle is powered off. Use a panel popper tool to pop up the highlighted shifter trim panel highlighted in (A), starting at the rear and moving forwards. Leave this panel loose and push it forwards, it does not need to be removed. Each of the rubber type side panels on each side of the center console need to be popped out, just the rear portion where arrows are need to be popped out (B) the panel does not need to be removed. The next panel highlighted in (C) pops straight up. Use a panel popper beginning at the rear and move forward, these clips are difficult. Six screws will be revealed (D), unscrew all six and carefully maneuver the sliding cover out.

-The remaining panel containing the cup holders has two clips in the rear to pop up (E). Before you pull that panel completely out, depress the clip to unplug the existing wiring going to the cup holders (F). Now take the center console to the work bench.

F

Installation:

-Remove the rubber insert from inside the cup holders by pulling up. Thoroughly clean inside each cup holder with an alcohol pad or Windex (this step is important for quality of adherent). Drill a 1/4" hole from the top of the center console, off center in each cup holder (G). Carefully run the LED disc wires through the holes and remove the red covering from the double-sided tape on the back of each cup holder disc. Center each disc and then press down firmly to secure each disc (do not remove disc once firmly pushed down). Flip over the cup holder panel and use electrical tape to carefully secure the black LED ribbon cable out of the way (from being crushed or twisted) (H).

G

H

-You can shorten the LED wires at this point. The wiring we need to tap into is already right there connected to the cup holders! Pull back the tape on the factory cup holder plug. Take each BLACK LED (-) wire and twist them together, do the same with each RED LED (+) wire (I). Use wire strippers to strip back the factory BLACK and RED wires (J).

I

J

-Connect both BLACK LED (-) wires to the BLACK (-) vehicle wire, wrapping them around the vehicle wiring. Do the same connecting the RED LED (+) wires to the RED (+) vehicle wire (K). Tape up each connection securely (L).

K

L

-You're all done! Bring the panel back into the vehicle and connect the factory plug and turn on the headlights of the car to test. Make sure the wiring is out of the way of the bottom of the cup holder panel when reassembling.
